Maharshi Ishu Jasraj

Backend Engineer (AI/LLM) · Python · Azure · Generative AI

Gurugram, India · maharshi.jasraj@gmail.com · maharshiishujasraj.netlify.app · github.com/Mecmaharshi · linkedin.com/in/maharshi-ishu-jasraj-729aa4203 · leetcode.com/Mecmaharshi

PROFILE

Backend engineer with 4+ years of experience building production AI systems in Python on Azure, specializing in generative AI, LLM integration (GPT-4.1, Claude), RAG, AI agents and event-driven serverless microservices. Experienced in system design, client delivery, end-to-end ownership and mentoring 8 junior developers.

EXPERIENCE

Full Stack Python Developer · Dentsu, Gurugram, India — Nov 2025 – Present

- Architected the multi-tenant backend of Dentsu's GenAI creative platform: 65+ Azure Durable Functions orchestrating 6 AI services to produce 300+ ad creatives monthly for 3 global brands.
- Pioneered flagship hero-object-preserving image generation from R&D to production, where Claude Vision (AWS Bedrock) finds placement surfaces and Firefly composites the real product with 100% product fidelity.
- Engineered fault-tolerant pipelines within APIM gateway timeouts using a stage-per-poll state machine, 3-tier LLM fallback and deferred asset uploads, reducing 504 failures tracked in Application Insights.
- Implemented tenant isolation for 3 brands (JWT, Key Vault secrets, quotas, feature flags), a provider-agnostic video layer (TikTok, Veo) and Event Hub upload scheduling.
- Standardized creative quality with LLM-as-judge scoring and human review, and turned brand-guideline PDFs into Cosmos DB rule sets, cutting regenerations by 20%+.
- Automated pull-request reviews with a GitHub Copilot AI skill adopted team-wide, running multi-pass checks of large PRs with 4 severity levels.

Backend Software Developer · Celebal Technologies, Jaipur, India — Sep 2022 – Nov 2025

- Led an intelligent document processing backend for financial firms (Azure Document Intelligence, Azure OpenAI), handling 30,000+ documents monthly at 99.9% uptime and reducing manual work by 60%.
- Delivered a Django call-analytics platform on cloud and on-premises Docker containers, analyzing 50,000+ interactions monthly with Azure Speech and Language at 90% accuracy, cutting manual review by 70%.
- Scaled an ML SaaS product to 1M+ data requests per day with 50+ FastAPI REST APIs on Azure Functions, improving processing efficiency by 40% and reporting accuracy by 25%.
- Partnered with clients from requirements to delivery, mentored 8 junior developers, built Azure DevOps CI/CD pipelines and PyTest suites, and migrated on-premises workloads to Azure.

PROJECTS

Enterprise Knowledge Assistant: Multi-Source Agentic RAG · Sole Architect and Backend Developer (Freelance)

- Developed a LangGraph RAG system on Azure AI Search where a router agent sends sub-questions to 4+ sources (SharePoint, Cosmos DB, SQL, web) and merges ranked, cited answers.
- Established document-level RBAC at retrieval, validated text-to-SQL, jailbreak guardrails and LLM-graded evaluation for 50–100 concurrent users, shrinking policy search from 10–15 minutes to seconds.

SKILLS

Python, FastAPI, REST APIs, Microservices, Generative AI, RAG, AI Agents, LangChain, LangGraph, Azure OpenAI, LLM Evaluation, Azure Functions, Cosmos DB, PostgreSQL, Docker

EDUCATION

Bachelor of Technology (B.Tech), Electronics and Communication Engineering — Jul 2019 – Jun 2023

Techno Main Salt Lake, Kolkata · CGPA: 9.15/10

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900) · Microsoft Certified: Azure AI Fundamentals (AI-900)
